

A drop-in fuel conditioner
trusted by superyachts to
cut soot, save fuel, and
protect engines — with
no modifications required.

Lower fuel costs

Lower emissions

↻ Zero CAPEX

ISO 8217 COMPLIANT,
17% IMPROVED LUBRICITY

C.90% PM REDUCTION

Lloyd's
Register

ISO 8217 COMPLIANT

How Sulnox Eco Gets Results

Sulnox Eco improves how fuel burns, reducing soot and saving fuel by making combustion more complete.

It works through four proven mechanisms:

- **Emulsification**
emulsifies free water into microscopic droplets within the fuel
- **Secondary Atomisation**
water droplets vaporise in the combustion chamber, fragmenting larger fuel droplets to increase surface area and deliver more complete combustion
- **Detergency**
gently decarbonises injectors and fuel systems
- **Lubricity**
reduces friction to lower wear and maintenance costs

Why Captains and Owners choose Sulnox Eco™

Save Fuel.

Average fuel savings of ~5% across marine vessels

Typical ROI >300% achieved within weeks

Works with all marine fuels: HFO, VLSFO, MGO, biofuels

Reduce Emissions.

Over 90% fewer particulates - verified on superyachts

Fewer carbon deposits on decks, hulls and pool areas

Also cuts CO₂, NO_x, and SO_x for cleaner onboard air

Protect Engines.

17% average increase in lubricity, reducing wear and scarring

Gently decarbonises engine components

Removes free water to guard against diesel bug

Immediate Impact.

Add Sulnox Eco whenever fuel is topped up — pre-mixed or onboard

ISO 8217 and EN 590 compliant

Flight-safe and shelf-stable for over 3 years

Sulnox Eco is already cutting fuel use and emissions for vessels worldwide.
